Demonstration of Webpage Design

In developing the database application, CRUD operations are implemented across the Member Management, Member Performance Management, Trainer Management, and Class Schedule pages. These pages can perform create (or edit), view, update and delete actions correctly and interact with database. The Member Overview page is designed to track member enrollment, displaying the total number of programs and classes attended, total payments made by customers, and their membership status. Next, the Top 5 Most Popular Programs table provides insights into customer preferences, enabling the centre to promote high-demand programs, increase engagement, and boost revenue. The Trainer Performance table evaluates trainer effectiveness, making it easier for the owner to identify top performers and award bonuses. The Membership Fee Summary records the number of subscribers in each membership type and consolidates the overall membership revenue. Most importantly, the Finance Report is designed to display the centre's overall income, providing a clear view of financial performance. An authentication feature has been implemented through the login page, ensuring that only users with valid credentials can access the centre management application. In addition, the Finance Report integrates with the Centre Overview Management by allowing the owner to easily review consolidated financial data and make informed decisions.
